Section Title: Supplier Controls for Product and Product-Related Material

Document Title: Pratt & Whitney – APU Source Qualification List (SQL)

WARNING

This document is the property of Pratt & Whitney (P&W), a division of Raytheon Technologies Corporation, and contains confidential and / or proprietary information. You may not possess, use, copy or disclose this document or any information in it, for any purpose, including without limitation to design, manufacture, or repair parts, or obtain FAA or other government approval to do so, without P&W's express written permission. Neither receipt nor possession of this document alone, from any source, constitutes such permission. Possession, use, copying or disclosure by anyone without P&W's express written permission is not authorized and may result in criminal and/or civil liability.

APPLIES TO: Pratt & Whitney (P&W) Group

1. PURPOSE AND SCOPE:

Background:

In 2012 Pratt & Whitney (P&W) acquired an auxiliary power unit (APU) business from UTC member company Hamilton Sundstrand (HS) and renamed it Pratt & Whitney (P&W) Aeropower.

The company designs, manufactures, and supports APUs and expendable thrust engines, and has more than 50 years of experience and demonstrated product performance over a complete range of aircraft.

In 2015, the Aeropower business was absorbed by the Pratt & Whitney Group (comprised of Pratt & Whitney and Pratt & Whitney Canada).

Purpose:

The *P&W APU Source Qualification List (SQL)* is authorized by the P&W Quality & Process Engineering (Q&PE) organization (aka Materials Control Laboratory (MCL)) and Pratt & Whitney Canada (PWC) Supplier Metallurgical Development (SMD) organization for OEM production support of P&W and PWC Auxiliary Power Unit (APU) systems only.

This document replaces the legacy Hamilton Sundstrand HS Report 80, “*HS Approved Process/Material Supplier Report*” and HS Report 85, “*Supplier Internal Processes Report*,” of approved qualified sources for applicable part manufacturers, providers of manufacturing special processes, and commercial laboratory testing facilities.

Requirements for the use of approved sources are invoked through the P&W Group Purchase Order flow down documents ASQR-01, “*Supplier Quality System*”

Page 2 of 80

Requirements,” PW-QA-6101, “Supplier Quality Assurance Requirements for Auxiliary Power Unit (APU) Hardware” or CPW 2001, “Special Process & NDT Requirements For Suppliers of APS Parts, Details and Assemblies.”

Note 1: The inclusion of a source on the APU SQL only signifies that the source, using materials, facilities and procedures acceptable to P&W Group, has shown evidence of compliance to applicable specification requirements. The source is not relieved of their responsibility for continued conformance as determined by periodic testing & evaluation, as required.

Scope:

Nadcap: Sources identified on this list must hold a current Nadcap® accreditation certificate for the specific manufacturing special process(es) used at the time of production to complete a P&W Group purchase order. In addition, sources that perform material testing (as a commercial lab or with captive in-house capability) must hold a current accreditation certificate by either Nadcap®, A2LA®, IAF/ILAC® or P&W Group approval (MCL Manual Section Appendix 56).

Upon loss of any accreditation certificate or approval as mentioned above (e.g., a failed audit or a lapse in accreditation), supplier must contact their P&W Group customer and/or P&W Group Buyer within 48 hrs. to receive guidance relative to continued production of APU product.

Nondestructive Testing (NDT): For sources that provide this type of service, NDT personnel certification requirements, system approvals and controls, as well as technical guidance, will be the responsibility of the P&W Group Non-Destructive Testing (NDT) organization. Please contact your P&W Group customer, P&W Group Buyer, or submit a Supplier Request for Information (SRI) through your supplier portal for further assistance.

Format:

The *P&W APU Source Qualification List (SQL)* is sorted by specification, (alphabetically and then numerically) and then by supplier name (alphabetically).

Note 2: In general and where applicable, an effort has been made to approve each specific mfg. special process (e.g., heat treat, welding, chemical processing, etc.) specification with the particular suffix (e.g., “type,” “grade,” “class” “-XX” or “/XX”) that may be noted on the engineering part drawing. In other instances, approval to a base specification may be interpreted as capability and authorization to perform this process to all applicable suffix notations.

In addition, this list includes three (3) appendices with the following approved sources:

Appendix A, “High Strength Fastener Manufacturers”

MATERIALS CONTROL LABORATORY MANUAL

Section: APU SQ List
Issued: 2015
Revision #: Y
Revised Date: 10/14/25
Page 3 of 80

Appendix B, “Laboratories, Independent Approved, Metallic Testing”

Appendix C, “Laboratories, Independent Approved, Non-Metallic Testing”

New source qualification approvals, including additions, deletions, and changes to this SQL will be the responsibility of P&W Q&PE.

The APU SQL is published on a quarterly basis to reflect any necessary updates/changes since the previous revision. It may be viewed electronically on the P&W Supplier Portal.

A copy of this SQL or any request for revision may be made by contacting your P&W Group customer or P&W Group Buyer or by submitting a Supplier Request for Information (SRI) in the appropriate manner.

2. OWNERSHIP AND APPROVAL:

The Chief, Materials Control Laboratory (MCL), P&W South & Supervisor Supplier Metallurgical Development P&W North, are the owners of this procedure. All revisions to this procedure must be approved by the owner and balloted in accordance with MCL Manual Section C-5.

3. DEFINITIONS:

Pratt & Whitney Group – Comprised of Pratt & Whitney Canada (a.k.a. P&W North) and Pratt & Whitney USA (a.k.a. P&W South).

4. NATURE OF CHANGE FOR THIS ISSUE:

- Updated APU SQL
